PROFESSIONAL SUMMARY

A results-driven Senior QA Engineer with 7 years of progressive experience dedicated to elevating quality standards across high-stakes domains including FinTech, Ecommerce, and Communication Compliance.... A contributor who defined and executed comprehensive Quality Roadmaps, oversaw resource prioritization for key sprints, and mentored junior team members to drive testing efficiency and ensure robust product quality. Expert in designing and scaling robust full-stack automation frameworks using tools (e.g., Cypress, Playwright, Selenium, and CodeceptJS, Appium). Specializing in the development and integration of custom automation tools (e.g., in-house device farms, custom reporting engines) to streamline testing workflows, significantly optimizing engineering velocity and ensuring meticulous product quality from inception to deployment.

TECHNICAL SKILLS

1. Core Automation & Fullstack Testing:

- Automation Frameworks: Cypress, Playwright, Puppeteer, Appium, WebdriverIO, CodeceptJS, Pytest, Selenium, RestAssured
- Languages & Scripting: JavaScript, TypeScript, Python, Bash, Unix Shell Script, AppleScript, Osascript, JAVA
- Tooling & Infrastructure: NodeJS API Servers, Mobile Device Farm, Appium Mobile Device Farm, Browserless
- CI/CD & Codebase management: Docker, Kubernetes, GitHub Action, GitLab Runner, GitHub, GitLab
- Reporting & TCM: ReportPortal, Allure, Excel, TestRail, Zephyr, Testomat.io, Qase
- Automation methodologies: TDD, BDD, ATDD, POM

2. Advanced Tooling & LLMs:

- AI Model Evaluation: Metric Design for evaluation AI, Benchmark Evaluation for LLMs, build automation testing framework using SelfCheckGPT or DeepEval
- OCR: OpenCV, Tesseract, Omniparser, Florence-2 Vision Model
- LLMs: Azure OpenAI, Ollama, Langfuse, LangChain, MCPs
- RAG: Qdrant, ChromaDB
- Embedding/Chunking: Azure OpenAI, dominic-text, ollama embedded models
- Advanced Methodology: AI-driven Automation

Education

HCM City University of Foreign Languages - Information Technology (HUFLIT)
Information Technology

Vietnam
Graduation Date

Experience

LeapXpert — Senior QA Full Stack Engineer

August 2022 – Nov 2025

*“As a Senior QA FullStack Engineer, I have pioneered the **Gen-AI Adaption** to transform quality assurance, culminating in the design and leadership of the **SinA QA Automation Assistant**. I engineered robust, self-hosted infrastructure, including an **In-House Device Farm**, and developed unique, custom automation solutions for challenging platforms like **WeChat Mini Program** and **iMessage Mac OS Client**.”*

- Pioneered Gen-AI Adaption to transform QA:
- + Engineered the custom SinA AI Assistant (RAG, ChromaDB) for workflow optimization
- + Integrated LLMs into vision-based testing (Omniparser V2)
- Developed and maintained a complete Mobile Device Farm In-House, managing ADB, Appium server functions via shell scripts to ensure reliable mobile testing infrastructure.
- Built custom automation frameworks for niche platforms, including an Osascript framework from scratch for iMessage Mac OS Client and specialized solutions for WeChat Mini Program context handling.
- Training junior and middle automation QA engineers, supporting hotfix deployments and maintaining quality standards across multiple product teams.

Hello Health Group — QA Leader

January 2022 – July 2022

“Spearheaded the Quality Assurance strategy and execution for a high-growth environment, architecting the company-wide Quality Roadmap and “Basement Test Case” framework. Successfully led the implementation of advanced automation frameworks, including a CodeceptJS/Playwright pipeline for AMP Google SEO integrity, while directing resource scaling and training across all levels of the QA team.”

- Quality Foundation Initiative — Architected and implemented the company-wide Quality Roadmap and design “Baseline Test Case” documentation, successfully standardizing testing strategy and practices across all product teams.
- Advanced Automation Frameworks — Define key technical initiatives, including building the CodeceptJS/Playwright automation framework and pipeline to verify AMP Google SEO linking integrity during deployment.
- Directed QA resource strategy, collaborating with Leadership to scale staffing and mentored all levels of QA staff (Fresher, Junior, Middle) on new technologies and automation principles.

Credify — QA Fullstack Engineer

Aug 2020 – Sep 2021

“Engineered full-stack automation solutions within the Fintech and Blockchain domains, leveraging Cypress and CodeceptJS for API and functional testing across microservices. Ensured 360-degree quality coverage by maintaining rigorous manual testing processes, developing custom plugins for specialized tasks like blockchain validation (EOS.io), and contributing to product scalability through dedicated performance testing initiatives.”

- Led full-stack automation efforts, applying Cypress and CodeceptJS for API and functional testing across microservices and mobile/web platforms.
- Developed custom automation plugins for complex domains, specifically implementing blockchain validation (EOS.io) and proprietary webhook testing solutions.
- Contributed to product scalability and reliability by executing performance testing using JMeter, K6, and custom SDKs.

Experience

SmartOSC — QA Engineer

Jan 2018 – July 2020

“Executed QA processes and contributed to test planning (Integration, Functional, UAT) for major global Ecommerce projects. Key projects included: ASUS Singapore (onsite execution), Sydney Opera House - Booking System (Australia), Smartbox (Ireland), and CENTRAL (Thailand). Successfully designed and maintained core automation frameworks (Selenium, Cypress, Robot Framework) and was recognized with the "SmartOSC employee best contribution of the year" award.”

- Designed, implemented, and maintained both manual and automated testing frameworks leveraging Selenium, Cypress, and Robot Framework.
- Executed test planning and execution (Integration, Functional, UAT) for major global Ecommerce projects
- Built a new Cypress framework specifically for integration and migration testing
- Developed UI and functional automation using Robot Framework and managed regression test suites in TestRail.
- Contributed with QA role in some projects by gathering requirements, creating test plans, and executing test cycles.

GameLoft — QA Tester

2016 – 2017

“Executed functional and regression testing for high-profile mobile games (*Sniper Fury*, *Dragon Maniac*). Ensured quality by collaborating with the Head Office in France and participating in open beta performance testing prior to major releases.”

- Executed functional and regression testing for high-profile mobile games, including *Sniper Fury* and *Dragon Maniac*.
- Collaborated closely with the Head Office in France to ensure game quality across multiple builds and releases.
- Participated in open beta performance testing and meticulously verified bug fixes before deployment.

Leadership & Activities

- **Mentorship & Training (LeapXpert):** Dedicated time to train and mentor junior and middle automation QA engineers in automation and Gen-AI principles, elevating current team technical capabilities.
- **Mentorship & Training (Hello Health Group):** Mentored and trained all levels of QA staff (Fresher, Junior, Middle) on new technologies and automation principles as a QA Leader.
- **Top Performance Award:** Recipient of the SmartOSC Employee Best Contribution of the Year award (2020), demonstrating consistent high performance on global projects.
- **Early Career Recognition:** Recognized as The youngest QA allocated for the best project of the company (SmartOSC, 2018), marking an early achievement in project excellence.

Interests

- Researching and learning new technologies
- Learning and apply new automation for testing, delivery
- Resolving problems
